

Experience the magic of fireworks lighting up the night sky over a snowy London landscape. Don't miss out on this breathtaking sight although it rarely snows in the capital. How?

Snowy Fireworks

Snowy fireworks shell is filled up with technical snow mixed with glowing in the dark star-like particles. The snow technology from ski resorts is frozen, artificially produced water droplets.

Once the firework reaches a certain height, the timed fuse ignites and activates the burst charge. This sets off the artificial snow mix within the firework which explodes into a dazzling display of glowing snow and sound, to present snowflakes like no other over the London skyline.
